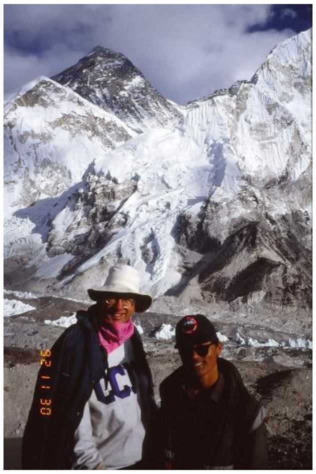
Edward Hindman’s studies of Mt. Everest meteorology



11 November 1992
Everest from 5645m Kala Patthar, Nepal. EH with guide Ang Kami Sherpa

21 April 1996
Everest from 4980m Rongbuk Monastery, Tibet

9 May 1996
Everest and Cho Oyu from 5206m Pang La, Tibet

19 April 1996 Everest, Gyachung Kang and Cho Oyu from 4348m Tingri Tibet

The peaks left-to-right: 8848m Mount Everest, 7952m Gyachung Kang and 8201m Cho Oyu. The image was taken by Prof. Hindman. He was leading a trans-Himalayan meteorological expedition to determine air pollution transport and suitable weather for the ultimate ascent of Everest, using a sailplane. Notice the soaring indicators: the dust-devil on the plains below Everest and the slope soaring Choughs at the extreme right.
