The Engineering Fellow will provide critical, high-level support to the CEO of CitizenWitness. This is an excellent opportunity to learn about the inner workings of a fast-growing, dynamic technology startup company.

CitizenWitness is focused on protecting individual citizens and their families through real-time access to a “CW Certified”™ attorney at the time of need.

The fellow will be expected to work 20 hours per week. CitizenWitness offers a flexible, collegial work atmosphere and many opportunities for professional growth.

The Engineering intern will report directly to the CTO and CEO and help establish the software development team based in New York. You will help define technical standards and drive the architectural and engineering vision.

The ideal candidate will have 2+ years of experience developing and supporting software systems. S/he is a strong individual contributor with strong quantitative, analytical, strategic thinking and problem solving skills.

Essential Duties and Responsibilities:
- Develop, test, and maintain software in support of our business.
- Code.
- Design solutions and technical specs.
- Ensure software follows best practices from a coding, testing, and performance perspective.

Qualifications Include:
- B.A. CS or Engineering.
- 5+ years of hands on development in Java.
- Solid understanding of internet technologies and protocols.
- Experience developing API’s and web services.
- HTML and JavaScript is a big plus.
- Understanding of ecommerce technology.
- Entrepreneurial drive.
- Thrive in a fast paced environment.
