Con Edison is seeking an engineering aide with their Distribution Engineering- Structures Group Department.

The general work deals with overseeing the DOT/DEP permit process as this is an important function of the group. The job requires good communication skills, organizational skills and a willingness to learn. There are also opportunities to go on field visits, perform calculations, do some design work, and attend meetings. Perhaps the most rewarding aspect of this co-op opportunity is the chance to work closely with PE’s who have a wide knowledge and background of civil engineering, management, and design. Furthermore, Con Edison is a melting pot of all engineering, business and management majors and there is more than enough opportunity to interfere and learn from this wide variety of professionals.

Seeking: Civil Engineering students of sophomore (or junior status at coming Fall).

Time: 20 hrs/week school days, and full time at summer, but times are flexible and can be worked out to fit the student’s schedule. The opportunity is available beginning this spring semester.

Skills: Microsoft office suite, good communication, good listening skills, and good organization.
